Portfolio

EDUCATION

B.Tech – CSE

Vignan Institute of Technology & Management
Dec 2021 – 2025 | GPA: 7.74/10

Class XII – Science

Aaryan Gurukul Residential College, 2021 (66%)

Class X

Gopabandhu High School, 2019 (66%)

TECHNICAL SKILLS

Languages: Java (21), JavaScript

Backend: Spring Boot, Spring MVC, Node.js, Express.js, REST APIs, WebSockets, Microservices

Web/Mobile: HTML5, CSS3, Bootstrap, React.js, Flutter

Databases: MySQL, MongoDB, H2, SQL, DBMS

Testing: JUnit 5, Mockito, Automated Test Suites

DevOps/Cloud: Docker, Kubernetes, GitHub Actions, Jenkins, AWS (EC2, S3), Firebase, Maven, CI/CD

OOP & Design: SOLID, DRY, Design Patterns, Collections, Generics, Multithreading

Tools: Git, GitHub, SonarQube, Postman, Power BI, VS Code, Agile

CODING PROFILES

LeetCode: leetcode.com/Asishranjansahu

HackerRank: hackerrank.com/Asish

CERTIFICATIONS

Java Full Stack

Apna College — 2024

Tata GenAI Powered Data Analytics Simulation

Forage — 2025

Java Programming Fundamentals

Infosys Springboard — Apr 2026

AWS Cloud Practitioner Certification

Mar – 2025

LANGUAGES

Odia (Native), Hindi (Fluent), English (Professional)

PROFESSIONAL SUMMARY

Motivated Computer Science Engineering student (GPA 7.00) with strong foundations in Data Structures & Algorithms, Java, and full-stack development. Developed real-time, distributed, and IoT-integrated systems spanning backend APIs, automated testing, and CI/CD pipelines. Seeking a software engineering internship at a product-based company to solve real-world problems at scale.

PROJECTS

Health Monitor API | *Spring Boot, WebSocket, H2, JUnit 5, Mockito, GitHub Actions* 2026

- Designed a Spring Boot REST API for real-time patient vitals monitoring using WebSocket STOMP streaming, enabling sub-second alert delivery to multiple concurrent clients without polling.
- Wrote JUnit 5 unit tests with Mockito to mock the repository layer, covering happy paths, edge cases, and exception handling; configured GitHub Actions CI/CD for automated Maven builds and test execution.
- Created a Chart.js dashboard to visualize live vitals; CI/CD pipeline ensures every build is tested before deployment.

Smart Campus Automation System | *React.js, Node.js, MongoDB, Firebase, Flutter* 2025 ·[LIVE](#)

- Architected end-to-end IoT automation across 200+ campus facilities managing lighting, attendance, and HVAC — cutting manual operational tasks by 60% and energy consumption by 25%.
- Built REST APIs consumed by a Flutter mobile app and React dashboard; CI/CD pipeline maintained 95% bug-free performance across 200+ automated test cases.

Dev Connect – Developer Collaboration Platform | *React.js, Node.js, MongoDB, Express.js*

- Designed a distributed backend using Socket.IO and WebSocket supporting concurrent real-time messaging for 75+ developers, solving message consistency under simultaneous load.
- Integrated AWS S3 for secure file sharing and the GitHub API for code collaboration, improving contribution frequency by 20% and reducing merge conflicts by 45%.

Spotify Clone | *Java, HTML, CSS, JavaScript*

- Launched a full-featured music streaming web app replicating Spotify's core UI and audio playback with MVC-style code organisation; shipped 3 custom playlist features, cutting navigation clicks by ~30%.

ACHIEVEMENTS & EXTRACURRICULARS

- Solved 150+ DSA problems across LeetCode & HackerRank covering Arrays, Linked Lists, Trees, Graphs & DP.
- Participated in college-level coding contests; consistently ranked in the top 20%.
- Active GitHub contributor maintaining well-documented repositories with READMEs, commit history, and live demos.
